- > Excellent, UK Customer Services, dedicated to small-medium businesses
- > Control your cash flow through Budget Plan payment (fixed DD)
- > Easy manage your account online with our SmartWeb service

> Taking the 'smartest' journey

There is no greater global cause than climate change and as part of the UK business community, you can make a real contribution to reducing carbon emissions. Switching your energy supply to a renewable product is one of the smartest choices your business will ever make. Here's how it works...

> Choice of product options, SmartFix up to 5 years

As well as committing to a green energy solution, you'll also benefit from fixing your supply prices against wholesale market increases. The longer you fix, the more protection for your business. You can 'SmartFix' your business against rising operating costs for a 1, 2, 3 or 5 year term.

> Clean energy backed by renewable certificates

Our products are powered by a blend of renewable generation including natural sources such as wind, solar and hydro. Renewable certificates are a guarantee that the electricity we supply comes from renewable sources. Every unit of electricity purchased is matched by an equivalent UK or European renewable certificate.

> Get a free Smart Meter for your business

With accurate billing and automated reads, smart meters can save your business time and money. Plus, they can help you understand your energy usage and give the industry more data to manage supply and demand at national level. We install one free within 8 weeks after you switch.

> Spread your energy costs with a Budget Plan

Avoid seasonal fluctuations and spread the cost of your electricity over the year with fixed monthly payments. To help you maintain a predictable cash flow, equal payments are taken once a month, on or around the same day by Direct Debit. Automated reads by your smart meter keep the payment amount accurate.

> Energy labels

Reporting your carbon reduction success

Whatever business or industry you are in, your commitment to climate change can make a real difference. To help you track your journey, each year SmartestEnergy Business will present you with an energy label.

The energy label is a smart way for you to demonstrate how much your business has helped to reduce carbon emissions, simply by choosing a renewable energy product.

You can use the label to report along with company performance and communicate success of your climate change goals to interested parties including customers, partners and staff.

> Dedicated, UK Customer Services

Supporting you every step

Since 2009, we have helped over 85,000 businesses to control costs and protect against market price uncertainty. Our personal service approach means we are often highly recommended by customers.

We are 100% focused on your energy needs, both now and in the future. This means we can help you start to reduce carbon emissions and work towards 'net zero'. Switching to a renewable energy product is a great way to kickstart your journey.
